

Case & Coldroom Control

Issue: 03/12

As a distributor and system integrator for Emerson Refrigeration controls products we have an extensive array of electronic refrigeration controls equipment to offer our customers.

Our primary focus is to provide refrigeration control solutions which offer our customers optimal temperature regulation with minimum energy consumption. We provide solutions which employ controllers from one or more of the Emerson companies and combine to provide the most effective solutions.

The emerson product range includes equipment from household names such as Dixell, Alco and Computer Process Controls.

As a net result the case and coldroom controllers we offer can range from simple effective temperature regulators operating a liquid solenoid through to controllers to operate PWM and stepper expansion valves ranging in capacity from commercial through to Industrial applications.

Features at a glance

- » Total System control solutions
- » Thermostat modulation
- » PWM and stepper expansion valve control
- » Intelligent defrost management
- » Fans, defrost and lighting control
- » Autonomous and centralised system control options
- » Optimised control when networked to emerson system supervisor
